

Backend Development

PHP Basics

Outline

- PHP History
- Why PHP
- What Do We Need
- Installation
- PHP Overview (Variables, Constants, Flow control,)

What is back-end development?

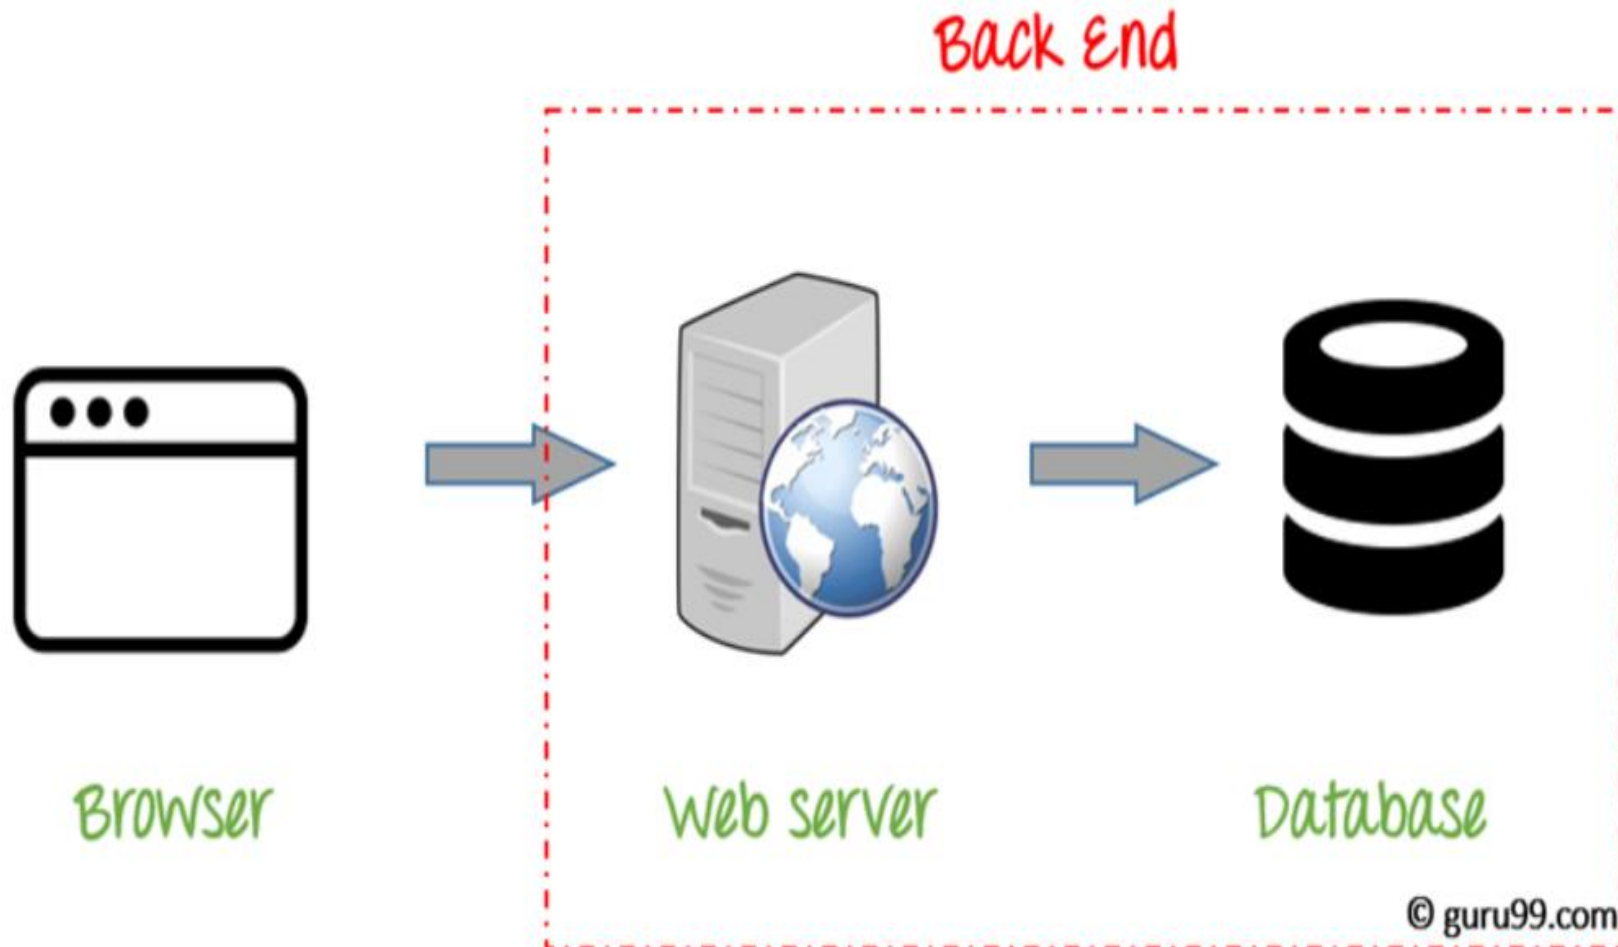

Back-end development means working on server-side software, which focuses on everything you can't see on a website. Back-end developers ensure the website performs correctly, focusing on databases, back-end logic, application programming interface (APIs), architecture, and servers. They use code that helps browsers communicate with databases, store, understand, and delete data.

On a team, back-end developers collaborate with front-end developers, product managers, principal architects, and website testers to build the structure of a website or mobile app. Back-end developers must be familiar with many kinds of tools and frameworks, including languages such as PHP, Python, Java. They make sure the back-end performs quickly and responsively to front-end user requests.

Web Page Life Cycle

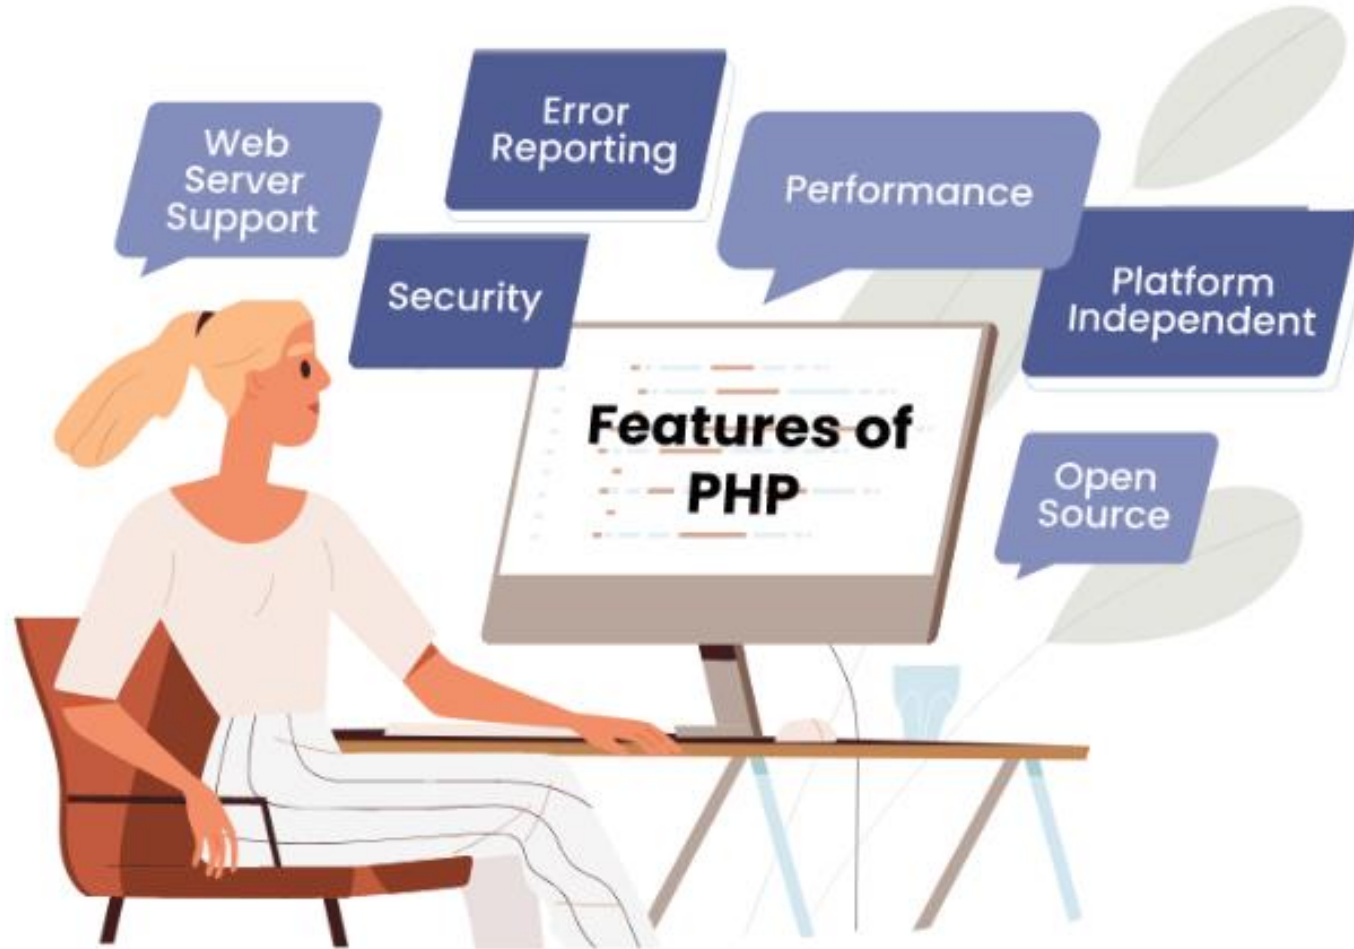

Back-End Development

What is PHP?

- PHP is a recursive acronym for "PHP: Hypertext Preprocessor".
- PHP is a server side scripting language that is embedded in HTML. It is used to manage dynamic content, databases, session tracking, even build entire e-commerce sites.
- PHP Syntax is C-Like.

Why PHP?

Syntax

```
<?php  
// Code Here  
?>
```

PHP Comments

```
<?php
```

```
// This is a single-line comment
```

```
# This is also a single-line comment
```

```
/*
```

```
Multi lines
```

```
Comments
```

```
*/
```

```
?>
```

PHP Variables

```
<?php
$txt = "Hello world!";    //String
$x = 5;                   //Integer
$y = 10.5;                //Float
?>
```

Rules for PHP variables

A variable starts with the \$ sign, followed by the name of the variable

A variable name must start with a letter or the underscore character

A variable name cannot start with a number

A variable name can only contain alpha-numeric characters and underscores (A-z, 0-9, and _)

Variable names are case-sensitive (\$age and \$AGE are two different variables)

Remember that PHP variable names are case-sensitive!

PHP echo Statement

```
<?php  
echo "<h2>PHP is Fun!</h2>";  
echo "Hello world!<br>";  
echo "I'm about to learn PHP!<br>";  
echo "This ", "string ", "was ", "made ", "with  
multiple parameters.";  
?>
```

PHP Data Types

Data Types in PHP

- Integers
- Objects
- Strings
- Booleans
- Arrays
- NULL

More Details about data types

https://www.w3schools.com/php/php_datatypes.asp

PHP String Functions

```
echo strlen("Hello world!"); // outputs 12
echo str_word_count("Hello world!"); // outputs 2
echo strrev("Hello world!"); // outputs !dlrow olleH
echo strpos("Hello world!", "world"); // outputs 6
echo str_replace("world", "Dolly", "Hello world!"); //
outputs Hello Dolly!
```

Complete string reference

https://www.w3schools.com/php/php_ref_string.asp

PHP Numbers

```
$x = 5985;  
var_dump(is_int($x));
```

is_int()

- is_float()
- is_double() // alias of is_float()
- is_numeric()

Casting

```
<?php
// Cast float to int
$x = 23465.768;
$int_cast = (int)$x;
echo $int_cast;

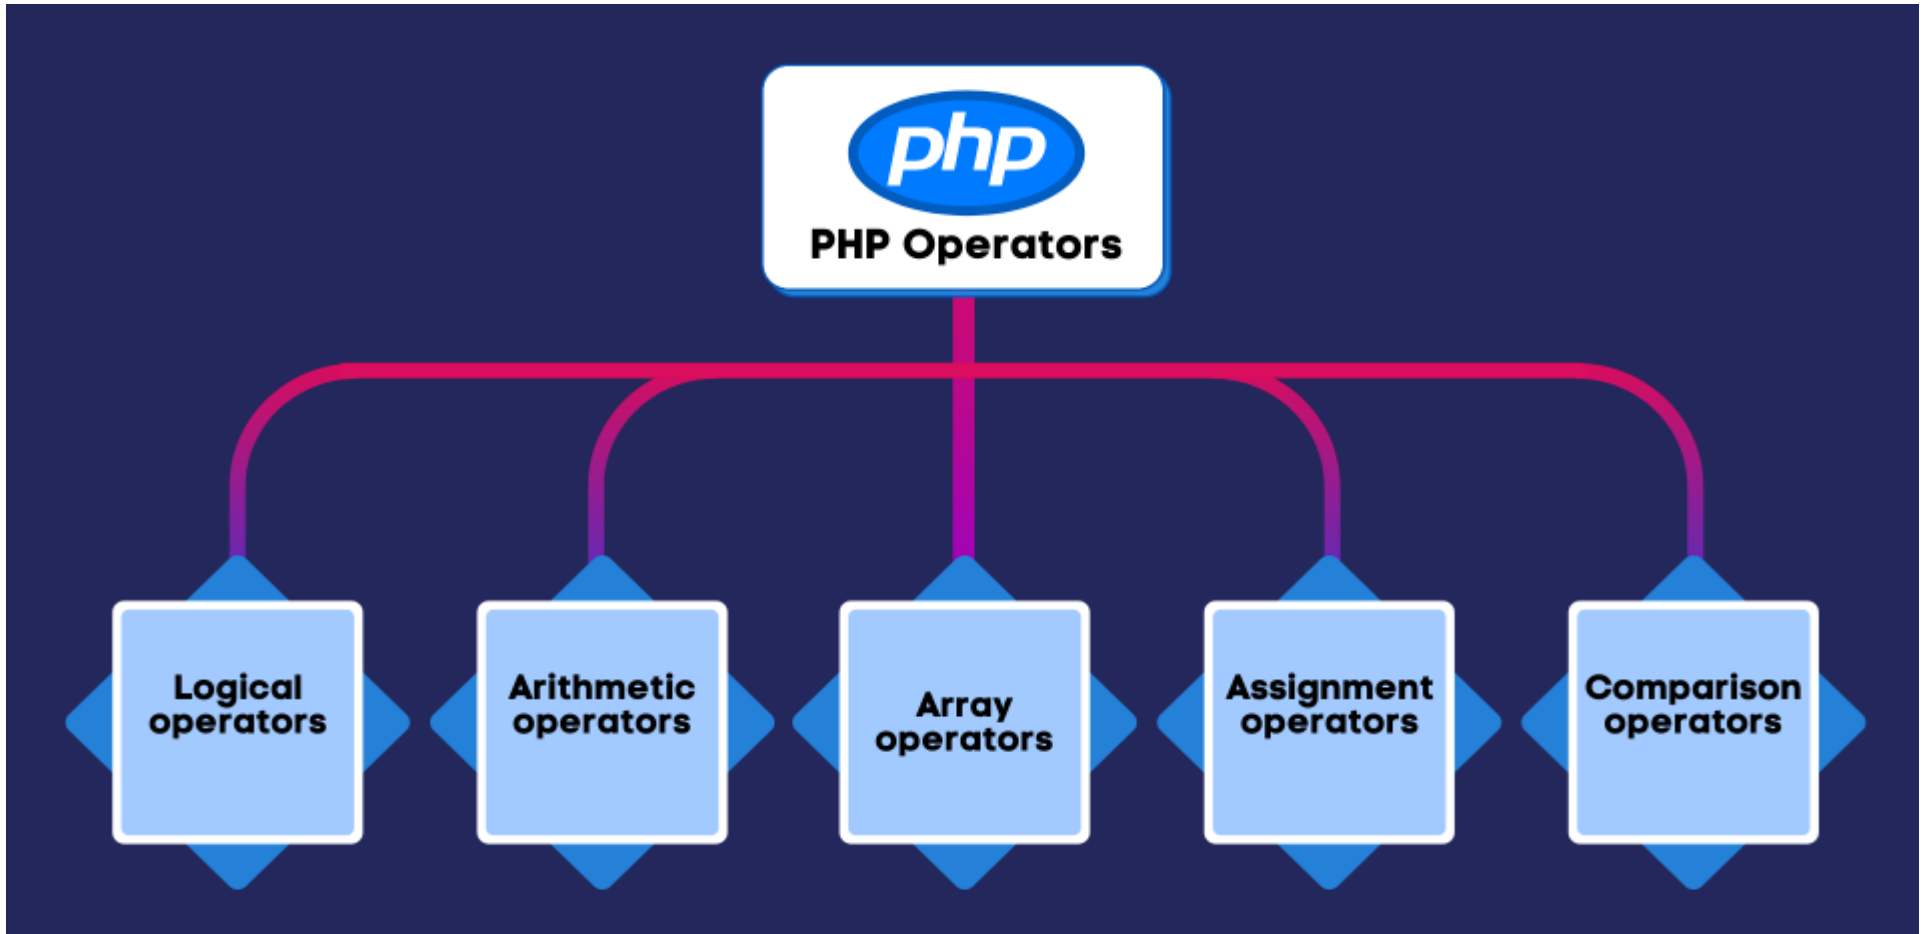

echo "<br>";

// Cast string to int
$x = "23465.768";
$int_cast = (int)$x;
echo $int_cast;
?>
```

PHP Constants

```
<?php  
define("GREETING", "Welcome to W3Schools.com!", true);  
echo greeting;  
?>
```

4 Ways To Display PHP Variables in HTML

Use delimiters

```
<?php
$first = "foo";
?>
<p><?php echo $first; ?></p>
```

formatted print

```
$val = "123";
printf("<p>PAD WITH DOTS %'.10d</p>", $val);
```

Use the PHP short tag

```
<?php
$var = "foo";
?>
<p><?=$var?></p>
```

echo an entire string of HTML

```
<?php
$first = "foo";
$second = "bar";
echo "<p>$first $second</p>";
```

PHP if..else..elseif Statements

```
<?php  
$t = date("H");  
  
if ($t < 20) {  
    echo "Have a good day!";  
}  
?>
```

else

```
<?php
$t = date("H");

if ($t < 20) {
    echo "Have a good day!";
} else {
    echo "Have a good night!";
}
?>
```

elseif

```
<?php  
$t = date("H");  
  
if ($t < "10") {  
    echo "Have a good morning!";  
} elseif ($t < "20") {  
    echo "Have a good day!";  
} else {  
    echo "Have a good night!";  
}  
?>
```

switch

```
<?php
$favcolor = "red";

switch ($favcolor) {
    case "red":
        echo "Your favorite color is red!";
        break;
    case "blue":
        echo "Your favorite color is blue!";
        break;
    case "green":
        echo "Your favorite color is green!";
        break;
    default:
        echo "Your favorite color is neither red, blue, nor
green!";
}
?>
```

While Loops

```
<?php  
$x = 1;  
  
while($x <= 5) {  
    echo "The number is: $x <br>";  
    $x++;  
}  
?>
```

Do while

```
<?php
$x = 20;

do {
    echo "The number is: $x <br>";
    $x++;
} while ($x <= 5);
?>
```

for

```
<?php
for ($x = 0; $x <= 10; $x++) {
    echo "The number is: $x <br>";
}
?>
```

For each

```
<?php  
$colors = array("red", "green", "blue", "yellow");  
  
foreach ($colors as $value) {  
    echo "$value <br>";  
}  
?>
```

Break and Continue

```
<?php
for ($x = 0; $x < 10; $x++) {
    if ($x == 4) {
        continue;
    }
    echo "The number is: $x <br>";
}
?>
```

Functions

```
<?php
function writeMsg() {
    echo "Hello world!";
}

writeMsg(); // call the function
?>
```

Function Arguments

```
<?php  
function familyName($fname) {  
    echo "$fname Refsnes.<br>";  
}
```

```
familyName("Jani");  
familyName("Hege");
```

return

```
<?php declare(strict_types=1); // strict requirement

function addNumbers(int $a, int $b) {
    return $a + $b;
}
echo addNumbers(5, "5 days");
// since strict is NOT enabled "5 days" is changed to
int(5), and it will return 10
?>
```

Arrays

```
<?php  
$cars = array("Volvo", "BMW", "Toyota");  
echo "I like " . $cars[0] . ", " . $cars[1] . " and  
" . $cars[2] . ".";  
?>
```

Indexed Arrays

```
<?php  
$cars = array("Volvo", "BMW", "Toyota");  
echo "I like " . $cars[0] . ", " . $cars[1] . " and  
" . $cars[2] . ".";  
?>
```

Complete reference

https://www.w3schools.com/php/php_ref_array.asp

Associative Arrays

```
<?php  
$age = array("Peter"=>"35", "Ben"=>"37", "Joe"=>"43");  
echo "Peter is " . $age['Peter'] . " years old."  
?>
```

Multidimensional Arrays

```
$cars = array (
    array("Volvo",22,18),
    array("BMW",15,13),
    array("Saab",5,2),
    array("Land Rover",17,15)
);
```

```
echo $cars[0][0].": In stock: ".$cars[0][1].", sold:
".$cars[0][2].".<br>";
echo $cars[1][0].": In stock: ".$cars[1][1].", sold:
".$cars[1][2].".<br>";
echo $cars[2][0].": In stock: ".$cars[2][1].", sold:
".$cars[2][2].".<br>";
echo $cars[3][0].": In stock: ".$cars[3][1].", sold:
".$cars[3][2].".<br>";
```

Superglobal - \$GLOBALS

```
<?php
```

```
$x = 75;
```

```
$y = 25;
```

```
function addition() {  
    $GLOBALS['z'] = $GLOBALS['x'] + $GLOBALS['y'];  
}
```

```
addition();
```

```
echo $z;
```

```
?>
```

Superglobal - \$_SERVER

```
<?php
echo $_SERVER['PHP_SELF'];
echo "<br>";
echo $_SERVER['SERVER_NAME'];
echo "<br>";
echo $_SERVER['HTTP_HOST'];
echo "<br>";
echo $_SERVER['HTTP_REFERER'];
echo "<br>";
echo $_SERVER['HTTP_USER_AGENT'];
echo "<br>";
echo $_SERVER['SCRIPT_NAME'];
?>
```

PHP \$_REQUEST

```
<html>
<body>

<form method="post" action="<?php echo $_SERVER['PHP_SELF'];?>">
    Name: <input type="text" name="fname">
    <input type="submit">
</form>

<?php
if ($_SERVER["REQUEST_METHOD"] == "POST") {
    // collect value of input field
    $name = $_REQUEST['fname'];
    if (empty($name)) {
        echo "Name is empty";
    } else {
        echo $name;
    }
}
?>

</body>
</html>
```

Superglobal - \$_POST

```
<html>
<body>

<form method="post" action="<?php echo $_SERVER['PHP_SELF'];?>">
    Name: <input type="text" name="fname">
    <input type="submit">
</form>

<?php
if ($_SERVER["REQUEST_METHOD"] == "POST") {
    // collect value of input field
    $name = $_POST['fname'];
    if (empty($name)) {
        echo "Name is empty";
    } else {
        echo $name;
    }
}
?>

</body>
</html>
```

Superglobal - \$_GET

```
<html>  
<body>
```

```
<?php  
echo "Study " . $_GET['subject'] . " at  
" . $_GET['web'];  
?>
```

```
</body>  
</html>
```

Create/Retrieve a Cookie

```
<?php
$cookie_name = "user";
$cookie_value = "John Doe";
setcookie($cookie_name, $cookie_value, time() +
(86400 * 30), "/"); // 86400 = 1 day
?>
<html>
<body>
```

```
<?php
if(!isset($_COOKIE[$cookie_name])) {
    echo "Cookie named '" . $cookie_name . "' is not set!";
} else {
    echo "Cookie '" . $cookie_name . "' is set!<br>";
    echo "Value is: " . $_COOKIE[$cookie_name];
}
?>

</body>
</html>
```

sessions

```
<?php
// Start the session
session_start();
?>
<!DOCTYPE html>
<html>
<body>

<?php
// Set session variables
$_SESSION["favcolor"] = "green";
$_SESSION["favanimal"] = "cat";
echo "Session variables are set.";
?>

</body>
</html>
```

*Thank
you*
